PROFILE

AI Engineer for the past two years at Malakoff Humanis, I design and ship high-value production systems built on unstructured data — LLMs, RAG and agentic systems, with end-to-end command of NLP, computer vision and MLOps. Comfortable bridging technical delivery and business needs, I'm looking for my next role on a permanent contract as an AI Engineer / Data Scientist focused on LLMs and RAG.

PROFESSIONAL EXPERIENCE

Malakoff Humanis — MH Tech, Data Science — **Paris, France**

AI Engineer / Data Scientist (apprenticeship) — 2024 – 2026 · 2 yrs

- Led ingestion for the **RAG service** behind an internal **HR assistant chatbot**: made the **scraping → chunking → indexing** chain (**BeautifulSoup**, 180 articles → 1K chunks) autonomous as a containerized job, added **content-hash incremental re-ingestion** cutting a **2-hour full re-index to minutes**, and fixed a **silent LLM truncation** bug dropping article content — **OpenSearch** hybrid search (**BM25** + **k-NN**), **S3**, **LiteLLM** proxy, tests and coverage gating a **Jenkins** image build.
- Built and deployed a **batch document-classification pipeline** (PDF and OCR parsing → labelling → training → prediction) reaching **85% accuracy** on a **1.1M-document corpus**, extracting **200K critical health-insurance contracts** and unblocking work that had been blocked for years for contract managers (8-month, 5-person project).
- Trained and integrated an **R-CNN computer-vision** model into a French tax-notice **NER** pipeline (100K notices/ year), lifting end-to-end performance by **+7 pp** over the QR-code-only baseline.
- Fine-tuned **BERT** for **hierarchical email triage** (3 levels, **200+ leaf classes**, 20K emails/month) reaching **70% accuracy** in production; surfaced edge cases and process-evasion patterns to the project owner via weekly business reviews — outcomes the team had no way of measuring before.

Formal Methods Laboratory (LMF) — Université Paris-Saclay — **Orsay, France**

Research Intern — Jun 2024 – Aug 2024 · 3 mos

- Built a **transaction-path visualization tool** for the Monero cryptocurrency; presented findings to the academic supervisor and a cyber police officer.

EDUCATION

Université Paris-Saclay — **Orsay, France**

MSc Computer Science for Data Science (Master ISD) — 2024 – 2026

Université Paris-Saclay — **Orsay, France**

BSc Computer Science and Mathematics — final year in parcours magistère (selective honors) — 2021 – 2024

ACADEMIC PROJECTS

Hackathon Gen AI 2026 — Multi-agent code-generation VS Code extension
Paris-Saclay × Paris 8 × UQAC (team of 4) — 2026

RAG Ticket-Resolution Chatbot
MSc school project (team of 4) — 2025

SKILLS

Programming: Python, SQL, Java, OCaml, Rust, JavaScript / Node.js, C / C++

AI / ML: PyTorch, scikit-learn, Transformers (BERT), NER, computer vision, spaCy, NLTK, PyMuPDF, NumPy, Pandas

LLM / Agentic: LangChain, LangGraph, LiteLLM, RAG (chunking, embeddings, hybrid BM25 + k-NN retrieval), multi-agent systems, prompt engineering, fine-tuning, LLM evaluation (faithfulness / groundedness), Snowflake Cortex

Data / MLOps: MLflow, Docker / ECR, Kubernetes, Jenkins, CI/CD, Airflow, Spark, ETL / ingestion pipelines, AWS S3, AWS OpenSearch, Snowflake, Dataiku

Tools: Git / GitHub / GitLab, Linux, JupyterLab, Visual Studio Code, IntelliJ IDEA, Tableau

Certifications: Dataiku Core Designer; Dataiku ML Practitioner

Languages: French (native); Mandarin Chinese (native); English (TOEIC 925/990, Linguaskill 177/180, EUGLOH program)
